

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

- 5 Claim 1 (currently amended): An input-sensor-integrated liquid crystal display panel, comprising:
- a first substrate having at least one pixel controlling circuit;
 - a second substrate having a touch-detecting circuit and a color filter formed on the touch-detecting circuit, being positioned on top of the first substrate;
 - 10 a liquid crystal layer filled between the space formed by the first substrate and the second substrate;
 - wherein the second substrate has at least one ~~protrusion~~edge jutting out the first substrate and connecting to the detecting circuit.
- 15 Claims 2-5 (canceled)
- Claim 6 (original): The input-sensor-integrated liquid crystal display panel of claim 1 wherein the touch-detecting circuit is positioned on an inner side of the second substrate facing the first substrate.
- 20 Claim 7 (canceled)
- Claim 8 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 1 wherein the first substrate dis-coincides with the second substrate
- 25 and has at least one protrusion.
- Claim 9 (original): The input-sensor-integrated liquid crystal display panel of claim 8 wherein the protrusion includes a plurality of signal connecting contacts.
- 30 Claims 10-11 (canceled)

Claim 12 (currently amended): The input-sensor-integrated liquid crystal display panel of claim 1 wherein ~~the touch detecting circuit is a resistance detecting circuit, a capacitance detecting circuit, a sound wave detecting circuit, or an optical detecting circuit~~ the second substrate has at least one protrusion jutting out the first substrate.

Claim 13 (currently amended): An input-sensor-integrated liquid crystal display panel, comprising:

- a first substrate having at least one pixel controlling circuit;
- 10 a second substrate having a touch-detecting circuit and a color filter, being positioned on top of the first substrate, the color filter and the touch-detecting circuit being formed on different sides of the second substrate;
- a liquid crystal layer filled between the space formed by the first substrate and the second substrate;
- 15 wherein the second substrate has at least one ~~edge protrusion~~ jutting out the first substrate and connecting to the detecting circuit.

Claim 14 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 13 wherein the touch-detecting circuit is positioned on an outer side of the second substrate.

Claim 15 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 13 wherein the first substrate dis-coincides with the second substrate and has at least one protrusion.

Claim 16 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 15 wherein the protrusion includes a plurality of signal connecting contacts.

Claim 17 (previously presented): The input-sensor-integrated liquid crystal display

panel of claim 13 further comprising a polarizer.

5 Claim 18 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 17 wherein the touch-detecting circuit is positioned between the second substrate and the polarizer.

10 Claim 19 (currently amended): The input-sensor-integrated liquid crystal display panel of claim 13 wherein the second substrate has at least one protrusion jutting out the first substrate ~~the touch detecting circuit is a resistance detecting circuit, a capacitance detecting circuit, a sound wave detecting circuit, or an optical detecting circuit.~~

Claim 20 (currently amended): An input-sensor-integrated liquid crystal display panel, comprising:
15 a first substrate having at least one pixel controlling circuit, and a color filter formed on the pixel controlling circuit;
a second substrate having a touch-detecting circuit and being positioned on top of the first substrate;
a liquid crystal layer filled between the space formed by the first substrate and
20 the second substrate;
wherein the second substrate has at least one edge protrusion ~~protrusion~~ jutting out the first substrate and connecting to the detecting circuit.

25 Claim 21 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the touch-detecting circuit is positioned on an inner side of the second substrate facing the first substrate.

30 Claim 22 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the touch-detecting circuit is positioned on an outer side of the second substrate.

Claim 23 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the first substrate dis-coincides with the second substrate and has at least one protrusion.

5

Claim 24 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 23 wherein the protrusion includes a plurality of signal connecting contacts.

10 Claim 25 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 further comprising a polarizer.

Claim 26 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 25 wherein the touch-detecting circuit is positioned between the
15 second substrate and the polarizer.

Claim 27 (currently amended): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the second substrate has at least one protrusion jutting out the first substrate ~~the touch-detecting circuit is a resistance detecting circuit, a capacitance-
20 detecting circuit, a sound wave detecting circuit, or an optical detecting circuit.~~
